

# ULINE H-7180, H-7181 GLASS DRY ERASE BOARDS

1-800-295-5510  
uline.com

Two Person Assembly Required

## TOOLS NEEDED

Power Drill

1/4", 5/16" and  
1/8" Drill Bits

Phillips  
Screwdriver Bit

Chalkline

Stud Finder

Tape Measure

Level

## PARTS

Glass Board x 1

Aluminum Tray x 1

### Board Hardware Kit

Outer Cap x 4

Plastic Anchor x 4

Drywall Anchor x 4

Wall Mount x 4

CS Screw x 4

### Marker Tray Hardware Kit

Tray Mount x 1

Phillips Tray Screw x 2

## SETUP

**WARNING!** Glass dry erase boards are made of safety glass, but improper handling and installation may cause serious injury if the board shatters. Proper installation will require at least two people.

**IMPORTANT!** Do not use unless all screws are tight. At least every six months, check all screws to be sure they are tight.

1. Make sure wall is flat. On drywall and stud walls, always hit studs (if possible). A minimum of 1/2" drywall is required. Use correct type anchor and predrill for the wall type.

# INSTALLATION

1. Determine what type of wall board will be mounted on.
2. Measure length, width and center lines of board and wall. Determine the desired height off the floor that bottom of board is to be at. Most boards are mounted about 36" off the floor. (See Figure 1)
3. With help, hold board up in position and draw a line around the perimeter. Make sure these drawn lines are parallel with the ceiling and floor.

**NOTE:** If wall has studs, mount into as many studs as possible.

## MOUNTING

1. Identify and separate all the parts and hardware.
2. Pick the correct type of mounting hardware and anchors for wall type.
3. Measure up  $1\frac{1}{4}$ " above the bottom line and draw another line that is parallel. Measure in about 6" from each side and install two bottom wall mounts using two CS screws. (See Figures 2-3)

**NOTE:** The wall mounts should be placed on 16" centers (as a minimum) and not more than 24" as a maximum.

Figure 3

## INSTALLATION CONTINUED

- Determine desired tray location and mark a line 1" above the bottom edge of board. Drill two 5/16" diameter holes in wall 5 3/4" apart.
- Push in two plastic anchors into predrilled holes. Place tray mount over plastic anchors and secure with two CS screws. (See Figure 4)

- Place aluminum tray in the front slot of tray mount and align the holes. Secure aluminum tray to tray mount using two phillips tray screws. (See Figure 5)

- Measure down 3/4" from the top line and draw another line that is parallel. Measure in about 6" from each side and install top two wall mounts using two CS screws. (See Figure 6)

 **NOTE:** Leave the top wall mounts pushed up.

- Apply self-adhesive pads to back of board. Peel one side of the backer from the pad and apply to the board as shown. (See Figure 7) Then peel the other side before mounting on the wall. Carefully position the panel left to right before applying pressure against the wall.

- Place the glass board on bottom wall mounts and screw in the two outer caps to secure. Tilt the glass board back and push down the top wall mounts onto the board's top edge. Secure board in place by screwing in the two top outer caps. (See Figure 8)
