TOOLS NEEDED

Drill

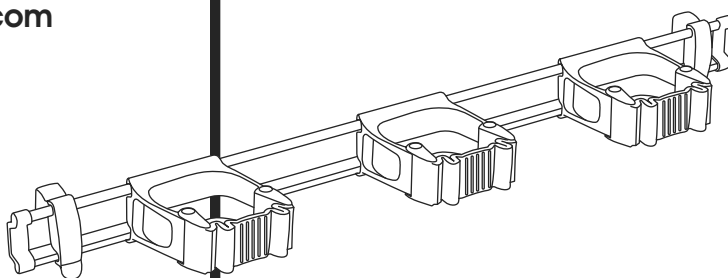

Level

Drill Bit (Optional)

Pencil

PARTS

Mounting Bracket
(2 for H-7866)
(3 for H-7867)

Mounting Bracket Clip
(2 for H-7866)
(3 for H-7867)

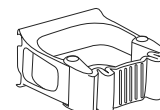

End Cap x 2

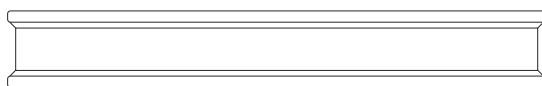

Wall Anchor (Optional)
(2 for H-7866)
(3 for H-7867)

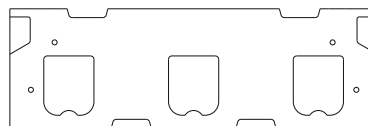

Screw
(2 for H-7866)
(3 for H-7867)

Holder
(3 for H-7866)
(5 for H-7867)

Aluminum Rail x 1

Mounting Template x 1

ASSEMBLY

1. Locate studs and align the mounting template. Balance with the level and mark the holes using the template. (See Figure 1)

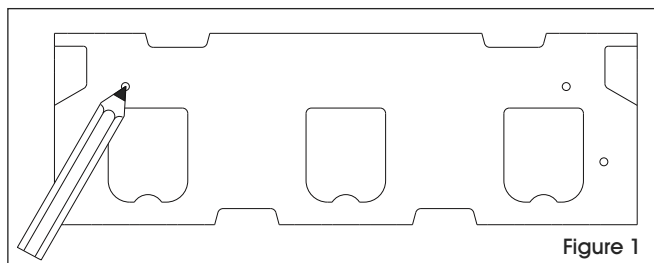

Figure 1

 **NOTE:** Holes in the mounting template have 16" spacing to accommodate U.S. stud configuration.

 **NOTE:** If not planning to drill into a stud, pre-drill holes in wall using a drill bit that is slightly smaller than wall anchor. Insert wall anchor into hole.

2. Screw each mounting bracket into the wall. (See Figure 2)

 **NOTE:** Do not overtighten.

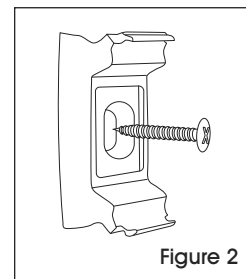

Figure 2

3. Install the end caps on the aluminum rail by snapping them firmly into each end. (See Figure 3)

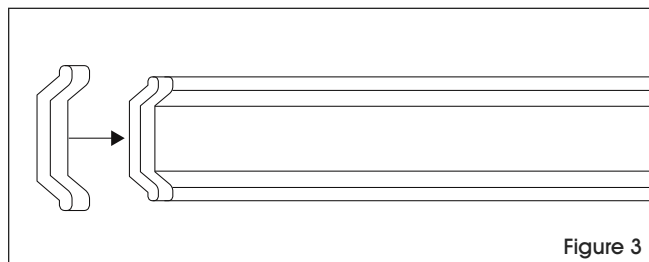

Figure 3

ASSEMBLY CONTINUED

4. Insert the aluminum rail into mounting brackets. Secure the rail by installing the mounting bracket clips. (See Figures 4-5)

NOTE: When mounting the bracket clips, secure the top first and then press down on the bottom until it clicks.

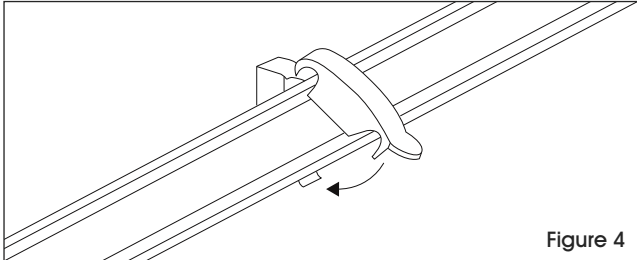

Figure 4

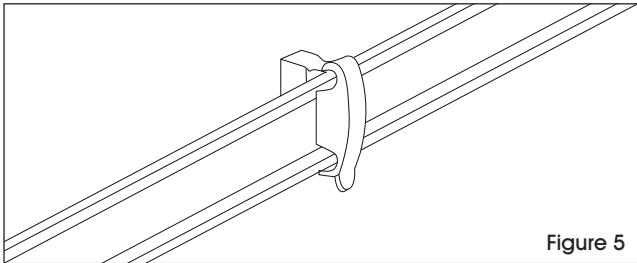

Figure 5

5. Attach holders to rail by securing the top and then pressing down on the bottom until it clicks. (See Figures 6-7)

NOTE: To remove and reposition holders, lift the tab at the bottom first.
